

WHAT A DIFFERENCE
USING AMPRO™
MAKES... A REALLY
BIG STEP FORWARD,
MY NEW FAVOURITE
IS AMPRO™.

SVEN KRAJA
Owner of FROG-Sails

Sven Kraja with the Land Yacht Manufactured using AMPRO™ CLR

Sven Kraja, owner of FROG-Sails in Germany, has been a boatbuilder for over 30 years and has worked with epoxy all his professional life. He used Gurit AMPRO™ in the manufacture of his land yachts, having previous experience with several other epoxy systems for the repair and construction of composite structures. He commented "What a difference using AMPRO™ makes. Due to its amine blush resistance, with no by-product formation or sticky surfaces, the sandpaper does not clog and can be used much longer. The long overcoating window means working is more relaxed, with the ability to apply subsequent coats up to 4 days later and no need for additional preparation. The high-gloss finish possible with AMPRO™ CLR was also a huge benefit. A really big step forward, my new favourite is AMPRO™".

An epoxy construction and repair solution for marine applications

TARGET
Manufacture of a land yacht

SOLUTION
Gurit AMPRO™ CLR

- BENEFITS**
- Amine blush resistant chemistry
 - 4 days overcoating window
 - No clogging of sandpaper
 - Saves both time and money
