# Gurit SCALES

Accurate, Automated Measuring System  
for Gurit Formulated Products

# Introduction to Gurit SCALES

**Traditionally epoxies have been widely used for light-weighting applications, such as boat-building and repairing. However, the perceived complexities and difficulties of achieving an accurate mix ratio has proven to be a barrier to wider adoption.**

Gurit has devised a solution specifically to overcome these barriers and improve user experience by introducing innovative weighing equipment that automatically calculates resin and hardener quantities.

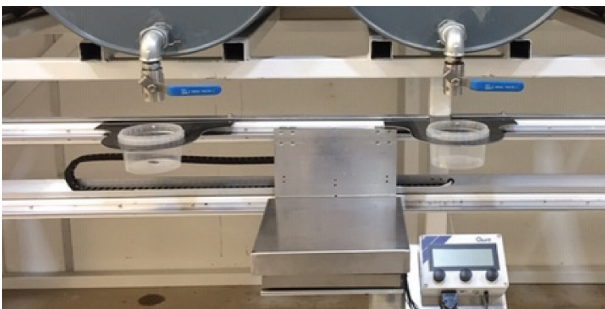

Key features of Gurit SCALES include:

- Compatible with all Gurit epoxy formulated products
- Error proof solution for an accurate mix ratio: no mathematical mix ratio calculations are required
- User friendly step-by-step commands
- Visual & numerical graphics show real-time weighing-out status
- Audio confirmation when the correct amount has been weighted
- Data capture feature for tracking resin usage
- Automatically compensates if too much resin or hardener added
- Built-in calibration process
- Weighing capability range: 150g to 30 kg +/- 0.1% tolerance

# Compatible Gurit Products

The Gurit SCALES have been developed for use with the full range of Gurit Formulated Products summarised below. Full details of specific hardener speeds and components are included overleaf.

- AMPRO™ Multi-purpose & SP 106 / SP 320 Legacy Systems
- Ampreg™ Laminating
- Spabond™ Adhesive
- PRIME™ Infusion
- Process Coats, Filling & Fairing and Tooling Systems

# Gurit SCALES Functions
