A FAMILY OWNED BUSINESS SERVING THE NDT INDUSTRY

Lemker & Harris is the leading manufacturer of mobile fiberglass radiographic testing darkrooms for the non-destructive testing service and inspection industry in the USA, in operation since 1975.

The company needed a core that could be manufactured to a high thickness tolerance, to allow them to integrate features like conduits and metal tapping plates without having those features show through in a finished product. They compared Kerdyn™ PET to other options on the market, and found the quality of Kerdyn™ to be significantly higher than its competitors.

“By using Kerdyn™ PET, we ended up with a significantly lighter, more consistent, and higher quality end product than what we had before, at an affordable cost,” says operations manager Robert Harris.

OVERVIEW

Industry > Construction / Industrial

TARGET

Create lighter weight mobile darkrooms

SOLUTION

Kerdyn™ PET Core

BENEFITS

Weight savings resulting in reduced fuel costs and lower environmental impact
